Performance of circuit breakers

IEC Standards covering Low Voltage Circuit Breakers provide the user with a better assurance of quality and performance by taking into account the actual operating conditions of the breaker. New definitions and symbols have been introduced which should be committed to memory. Some of those most frequently used are:

Ue: rated service voltage
 Ui: rated insulation voltage (> Uemax)
 Uimp: rated impulse withstand
 Icm: rated short circuit making capacity
 Icn: rated short circuit capacity
 Ics: rated service short circuit breaking capacity
 Icu: rated ultimate short circuit breaking capacity
 Irn: rated residual operating current (often called residual sensitivity)
 In: rated current = maximum value of current used for the temperature rise test
 t: trip delay of residual current devices

In addition IEC60947-2 sets out to provide a greater degree of safety to the uninstructed users of circuit breakers. It is interesting to note that the description 'miniature circuit breaker' or MCB is not used at all in this standard, but no doubt both manufacturers and users will continue to call circuit breakers complying with IEC60947-2 miniature circuit breakers or MCBs for some time to come.

The scope of this standard is limited to ac air break circuit breakers for operation at 50Hz or 60Hz, having a rated current not exceeding 125A and a rated short-circuit capacity not exceeding 25kA.

A rated service short-circuit breaking capacity Ics is also included which is equal to the rated short-circuit capacity Icn for short-circuit capacity values up to and including 6kA, and 50% of Icn above 6kA with a minimum value of 7.5kA. As the circuit-breakers covered by this standard are intended for household and similar uses, Ics is of academic interest only. The circuit-breakers capacity of a MCB (Icn) is the alternating component of the prospective current expressed by its r.m.s. value, which the MCB is designed to make, carry for its opening time and to break under specified conditions. Icn is shown on the MCB label in a rectangular box without the suffix 'A' and is the value

Which is used for application purposes. Icn (of short-circuit current at the point of application) You will see from the curves that the inverse time / current characteristic which provides overload protection is the same on all three. This is because the international IEC60947-2 Standard requires the breaker to carry 1.05 times the rated current without tripping for at least one hour and when the test current is increased to 1.3 times the rated current, it must trip within one hour, and again from cold if the current is increased to 2 times the rated current the breaker must trip between 1 and 120 seconds. The inverse time delay characteristic of all MCBs claiming compliance with IEC60947-2 must operate within these limits.

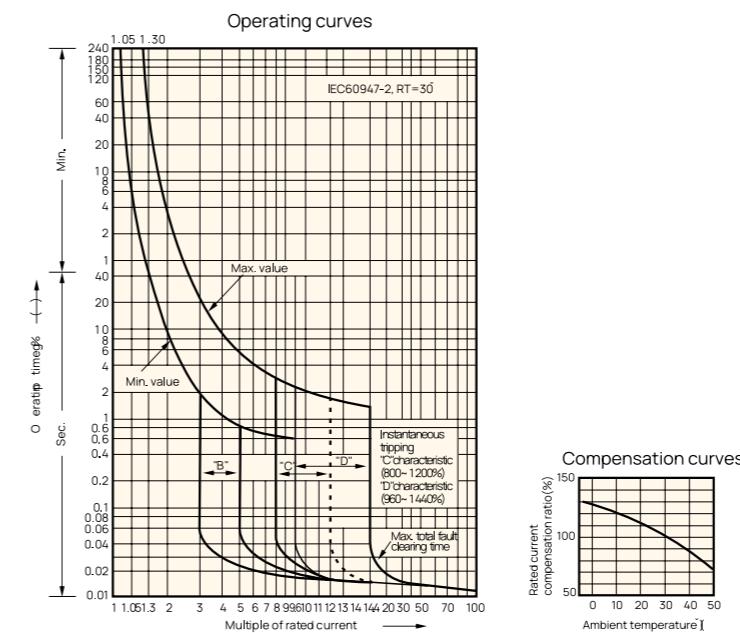

The difference between the three types of characteristic curves designated 'B', 'C' and 'D' concerns only themagnetic instantaneous trip which provides short-circuit protection.

- For type 'B' the breaker must trip between the limits of 3 to 5 times rated current
- For type 'C' the breaker must trip between the limits of 8 to 12 times rated current and
- For type 'D' the breaker must trip between the limits of 9.6 to 14.4 times rated current.

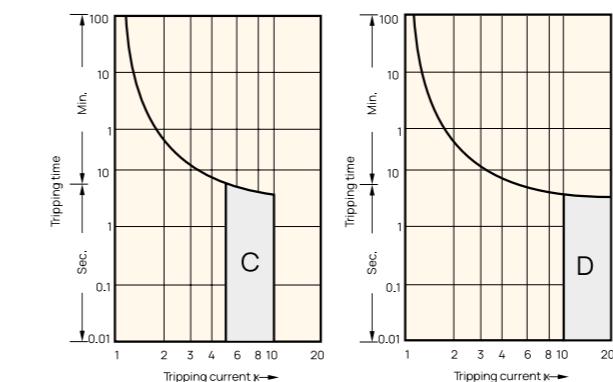

Often manufacturers publish their MCB tripping characteristics showing the limits set by the standard and guarantee that any breaker that you purchase will operate within these limits. So great care should be taken when working with characteristic curves showing lower and higher limits - on no account should you take a mean point for application design purposes.

For cable protection applications you should take the maximum tripping time and some manufacturers publish single line characteristic curves which show the maximum tripping time. If the design problem is nuisance tripping then the minimum tripping time should be used and for desk top co-ordination studies, both lower and upper limits have to be taken into account.

Remote indication accessories

OF AUXILIARY CONTACT

- External circuit, indicating the circuit breaker's ON/OFF status
- Basic type of auxiliary contact: 1NO/1NC
- Wiring capacity: 1-2.5mm² wire

SD ALARM CONTACT

- Send signals of fault tripping of the circuit breaker
- With mechanical indication available on the front panel, to indicate fault tripping
- Basic type of auxiliary contact: 1NO/1NC
- Wiring capacity: 1-2.5mm² wire

Tripping accessories

MX+OF SHUNT RELEASE

- External circuit, indicating the circuit breaker's ON/OFF status
- The circuit breaker for use with the release will be triggered to trip upon receiving a signal
- Basic type of auxiliary contact: 1NO/1NC
- Wiring capacity: 1-2.5mm² wire

MV OVER-VOLTAGE RELEASE

- Provide line protection due to over-voltage fault
- The circuit breaker for use with the release will be triggered to trip when the voltages at both ends of the release rise to the rated voltage range
- With fault tripping indication available on the front panel, to indicate an over-voltage tripping with the indicator popped up
- Rated operating tripping over-voltage: (280±14) V AC
- Wiring capacity: 1-2.5mm² wire

MN UNDER-VOLTAGE RELEASE

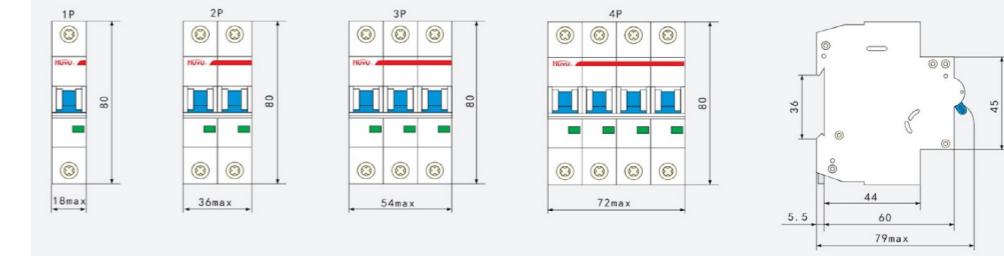

- Provide line protection due to under-voltage fault
- The circuit breaker for use with the release will be triggered to trip when the voltages at both ends of the releasee drop to the rated voltage range
- With fault tripping indication available on the front panel, to indicate under-voltage tripping with the indicator popped up
- Rated operating tripping under-voltage: (161 ± 8.05) V AC
- Under-voltage protection range: (35 ~ 70%) of Ue
- Wiring capacity: 1-2.5mm² wire

MVMN OVER/UNDER-VOLTAGE RELEASE

- Provide line protection due to over-voltage and under-voltage fault
- The circuit breaker for use with the release will be triggered to trip when the voltages at both ends of the releasee rise or drop to the rated range
- With fault tripping indication available on the front panel, to indicate over-voltage or under-voltage tripping with the indicator popped up
- Rated operating tripping over-voltage: (280 ± 14) VAC
- Rated operating tripping under-voltage: (161 ± 8.05) VAC
- Under-voltage protection range: (35% ~ 70%) of Ue
- Wiring capacity: 1-2.5mm² wire

MNS LOSS-VOLTAGE RELEASE

- The circuit breaker for use with the release will be triggered to trip when the power supply voltage drops to the rated range, to achieve under-voltage protection
- Ensure the circuit breaker to close normally when the power supply voltage returns to normal
- Prevent the circuit breaker from re-closing when the power supply voltage is zero or drops to the rated voltage range
- With fault tripping indication available on the front panel, to indicate under-voltage tripping when popped up
- Rated operating tripping under-voltage: (161 ± 8.05) VAC, with under-voltage protection range of (35% ~ 70%) of Ue
- Normal recovery voltage: $\geq 85\%$ Ue, with loss-voltage protection range $\geq 35\%$ Ue
- Wiring capacity: 1-2.5mm² wire- Wiring capacity: 1-2.5mm² wire
